

TABLET COMPUTING DEVICE WITH THREE-DIMENSIONAL DOCKING SUPPORT

ABSTRACT OF THE DISCLOSURE

The present invention provides a tablet computer and a
5 docking station assembly. This docking station comprises a
docking assembly for positioning with three degrees of freedom
and having a data connector for mechanically supporting and
interfacing with the tablet computer. A support member
couples the docking assembly to an expansion base. The base
10 includes a number of ports for interfacing with a variety of
peripheral devices or power supplies. These varieties of
ports mount to a printed circuit board contained within the
expansion base. A flexible printed circuit (FPC) combines the
signal pathways for the variety of ports, allowing the signal
15 pathways to travel from the printed circuit board and to the
data connector. The tablet computing device has a plurality
of contact or touch points positioned on the right and left
edges of the tablet to facilitate aligning the tablet to the
docking assembly in either a landscape or portrait mode.
